We sell and ship various kinds of fruit, also grapes, in season from our orchard and vineyard to all parts of Texas and other points.

#### HOW TO PLANT

Trees and plants should always be set out as soon as received. If unable to do so, remove packing material and heel in the ground, covering thoroughly with moist soil.

When planting, make a rather large hole, fill up with good top-soil so as to set the tree the same depth it stood in the nursery. Only mellow top-soil should be used among the roots; it should be packed firmly, having the roots in their natural position, which must not be damaged or bruised.

Trees must be trimmed and watered at planting. Manure or other fertilizer should not be used while planting, perhaps later. Trees are best protected against depredations by rabbits, etc., when the trunks are whitewashed with a solution of lime and blood in the Spring and Fall. Crushed glass scattered in the ground among the roots protects the trees against gophers.
